

CHARGING CABLE

Ray

- The smallest control box on the market
- Double temperature sensors
- Adjustable current level
- Light and flexible

The smart Ray charging cable, with the smallest control box on the market, lets you safely charge using a regular wall socket.

When there are no charging stations available and you need to charge using a regular wall socket, Ray is a safe choice.* With double temperature sensors that constantly detect the heat in the socket, Ray adjusts the current level to prevent harmful heat generation. It only switches off completely if absolutely necessary, and always remembers the last set current level if there is a restart.

*for constant charging in the same outlet, we always recommend installing a charging station.

TECHNICAL INFORMATION

Article number:	Type 1: 100310 Type 2: 100312
Charging current:	Adjustable between 6–16 A
Operating temperatures:	-25 °C to +45 °C
Charging standard:	Mode 2
Voltage:	220–240 V
Protective earth:	RCD typ A, <30 mA, Automatic reset
IP-rating:	IP 66
Cable:	7.5 m long
Weight:	1.8 kg
